

Antenna & Wave Propagation

[ REVISED COURSE ]

CON/4856-06.

YM-7150

( 3 Hours )

[ Total Marks : 100 ]

N.B. [1] Question No.1 is compulsory

[2] Answer any four out of remaining six questions

[3] Assumptions made should be clearly stated

[4] Assume any suitable data wherever required but justify the same

[5] Figures to the right indicate marks

[6] Illustrate answer with sketches wherever required

[7] Answer to questions should be grouped and written together

[8] Use a blue/black ink pen to write answers. Use of pencil should be done only to draw sketches and graphs

- |  |    |
|--|----|
| 1. Explain the following:-   | 20 |
| (a) Friis transmission equation,                                     |    |
| (b) Maxwell's equations.   |    |
| (c) Ground effects and their applications,                           |    |
| (d) Planar array and their applications,                             |    |
| (e) Loop antennas.   |    |
| 2. (a) Explain the basic antenna parameters.                         | 10 |
| (b) Retarded potentials and their importance.                        | 10 |
| 3. (a) Wire antennas and their specific applications,                | 10 |
| (b) End fire vs Broadside arrays.                                    | 10 |
| 4. (a) Travelling wave antennas and their applications,              | 10 |
| (b) Log periodic antennas vs Aperture antennas.                      | 10 |
| 5. Various reflector antennas and their applications.                | 20 |
| 6. Types of microstrip antennas and their characteristics.           | 20 |
| 7 Explain different microwave propagation methods and their effects. | 20 |
