## From Dean's Desk:

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Semester based Credit and Grading system enables a much-required shift in focus from teachercentric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 12-13 weeks and remaining 3-2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2014-2015 and 2015-2016 respectively.

Dr. S. K. Ukarande Dean, Faculty of Technology, Member - Management Council, Senate, Academic Council University of Mumbai, Mumbai

### Preamble:

In the process of change in the curriculum there is a limited scope to have major changes in the fundamental subjects which are mainly part of second year of engineering. The exposure to the latest technology and tools used all over the world is given by properly selecting subjects and their hierarchy in pre-final and final year. Thus this syllabus is made to groom the undergraduate students best suited and competent in all respect with best possible efforts put in by the experts in framing detail contents of individual subjects.

The engineering education in India is expanding in manifolds and the main challenge is the quality education. All the stakeholders are very much concerned about it. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the one of the approach of quality assurance in higher education and it is also an achieving recognition.

The institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation. An engineering program must ensure that its graduates understand the basic concepts of science and mathematics, have gone through one engineering field in department of appreciate and use its methodologies of analyses and design, and have acquired skills for life-long learning.

An engineering program must therefore have a mission statement which is in conformity with program objectives and program outcomes that are expected of the educational process. The outcomes of a program must be measureable and must be assessed regularly through proper feedback for improvement of the programme. There must be a quality assurance process in place within the institute to make use of the feedback for improvement of the programme. The curriculum must be constantly refined and updated to ensure that the defined objectives and outcomes are achieved. Students must be encouraged to comment on the objectives and outcomes and the role played by the individual courses in achieving them. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as Chairman, Board of Studies in Electronics Engineering University of Mumbai, happy to state here that, heads of the department and senior faculty from various institute took timely and valuable initiative to frame Program Educational Objectives as listed below.

- 1. To provide students with a strong foundation in the mathematical, scientific and engineering fundamentals necessary to formulate, solve and analyze engineering problems and to prepare them for graduate studies.
- 2. To prepare students to demonstrate an ability to identify, formulate and solve electronics engineering problems.
- 3. To prepare students to demonstrate ability to design electrical and electronics systems and conduct experiments, analyze and interpret data.
- 4. To prepare students to demonstrate for successful career in industry to meet needs of Indian and multi-national companies.
- 5. To develop the ability among students to synthesize data and technical concepts from applications to product design.
- 6. To provide opportunity for students to work as part of teams on multidisciplinary projects.
- 7. To promote awareness among students for the life-long learning and to introduce them to professional ethics and codes of professional practice.

These are the suggested and expected main objectives and individual affiliated institute may add further in the list. In addition to Program Educational Objectives, for each course of undergraduate program, objectives and expected outcomes from learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I believe strongly that small step taken in right direction will definitely help in providing quality education to the stake holders.

The subjects offered to undergraduate students in pre-final year are at par to the requirement of industry. The students are also made competent to appear for various competitive examination conducted in India and abroad. The subjects offered are at enough level to prepare a base of the students to understand and learn latest state of technology. The students are trained in such a way that they become versatile in hardware and software simulation. Some subjects offered upgrades them in the field of information and technology which is a need of today's' era.

At the end I must outset extend my gratitude to all experts who contributed to make curriculum competent at par with latest technological development in the field of electronics engineering.

## Dr. D. G. Borse Chairman, Board of Studies in Electronics Engineering

## **Course Pre-requisite:**

- EXC303: Digital Circuits and Design
- EXC402: Discrete Electronic Circuits
- EXC403: Microprocessor and Peripherals

#### **Course Objectives:**

- 1. Learner shall study Architecture of microcontroller like intel8051 and ARM and its usages.
- 2. Learner shall also develop interpretation, analysis and design skill using microcontrollers and various peripherals.
- **3.** At the end of course learner should be capable to design and develop a simple microcontroller based application.

#### **Course Outcomes:**

The student should be able to:

- 1. Explain basic terminology and describe the components, parts and operation of a microcontroller based system.
- 2. Describe the microcontroller architecture and usages of the instruction set of the representative microcontrollers.
- 3. Explain and perform input/output and interrupt operations in a microcontroller system.
- 4. Interpret and write simple programs for microcontroller applications.

Module No.	Unit No.	Topics	Hrs.
1		8051 Microcontroller Architecture	6
	1.1	8051 architectural features and its purpose, advantages	
2		8051 Microcontroller Assembly Language Programming	12
	2.1	Bit, byte, word processing, format conversion between HEX, BCD, ASCII	
	2.2	Data movement / copy operations, Block transfer of data, data swap / exchange	
	2.3	Arithmetic, logical, and stack operation, loops, condition evaluation, decision making based on flags	
	2.4	Call, return, jumps, serial and parallel port handling, timer / counter handling, interrupts and its handling	
3		8051 Microcontroller Hardware and Software Applications	10
		<b>Objectives:</b> Interpreting logical, electrical, timing specification, requirement of following interfaces and interfacing and accessing/controlling using assembly programs	10
	3.1	External memory interfacing and memory access cycles, polled I/O, Interrupt I/O	
	3.2	<b>Serial communication using RS232</b> : Pulse width modulation and DC motor interfacing, electromagnetic relay, stepper motor interfacing, switch interfacing, SCR firing circuit (with electrical isolation)	
	3.3	<b>Parallel input/output interfacing</b> : 7-segment LED display interfacing, 8- bit parallel DAC interfacing, 8-bit parallel ADC interfacing, 4x4 matrix keyboard interfacing, temperature (resistive, diode based) sensor, optical (photodiode/ phototransistor, LDR) sensors interfacing, 16x2 generic alphanumeric LCD interfacing	
4		ARM7TDMI(ARMv4T) Architectural	10
	4.1	Features, purpose, and advantages	
	4.2	Processor operating states, memory formats, data types, operating modes, registers	
	4.3	The program status registers, exceptions, interrupt latencies, and pipelined architecture advantage	
5		ARM7TDMI(ARMv4T) Assembly Language Programming	10
	5.1	8,16,32 bit and floating point numbers processing, format conversion between Hex, BCD, ASCII, data movement/copy operations, block transfer of data, data swap/exchange	
	5.2	Arithmetic, logical, and stack operation, loops, condition evaluation and decision making based on flags, control transfers (Call, Return, Jumps), processor state changing (ARM $\leftarrow \rightarrow$ THUMB)	
	5.3	Exceptions, interrupts and its handling	
6		LPC2148 based C Program Applications	4
	6.1	Applications for On-chip ADC, DAC, parallel port, and serial port accessing

## **Course Pre-requisite:**

- FEC105: Basic Electrical & Electronics Engineering
- EXC302: Electronic Devices
- EXC303: Digital Circuits and Design
- EXC402: Discrete Electronic Circuits

#### **Course Objectives:**

- 1. To teach fundamental principles of standard linear integrated circuits.
- 2. To develop a overall approach for students from selection of integrated circuit, study its specification, the functionality, design and practical applications

#### **Course Outcomes:**

After successful completion of the course student will be able to

- 1. Demonstrate an understanding of fundamentals of integrated circuits.
- 2. Analyze the various applications and circuits based on particular linear integrated circuit.
- 3. Select and use an appropriate integrated circuit to build a given application.
- 4. Design an application with the use of integrated circuit

Module	Unit	Topics	Hrs.
<u>No.</u>	No.	Fundamentals of Operational Amplifier	06
	1.1	Ideal Op Amp, characteristics of op-amp, op-amp parameters, high frequency effects on op-amp gain and phase, slew rate limitation, practical determination of op-amp parameters, single supply versus dual supply op-amp	vu
	1.2	Operational amplifier open loop and closed loop configurations, Inverting and non-inverting amplifier	
2		Applications of Operational Amplifier	12
	2.1	<b>Amplifiers:</b> Adder, subtractor, integrator, differentiator, current amplifier, difference amplifier, instrumentation amplifier and application of Op-Amp in transducer measurement system with detail design procedure, single supply DC biasing techniques for inverting, non-inverting and differential amplifiers	
	2.2	<b>Converters:</b> Current to voltage and voltage to current converters, generalized impedance converter	
	2.3	Active Filters: First order filters, second order active finite and infinite gain low pass, high pass, band pass and band reject filters	
	2.4	Sine Wave Oscillators: RC phase shift oscillator, Wien bridge oscillator, Quadrature oscillator	
3	0.1	Non-Linear Applications of Operational Amplifier	12
	3.1	<b>Comparators:</b> Inverting comparator, non-inverting comparator, zero crossing detector, window detector and level detector	
	3.2	Schmitt Triggers: Inverting Schmitt trigger, non-inverting Schmitt trigger with adjustable threshold levels	
	3.3	<b>Waveform Generators:</b> Square wave and triangular wave generator with duty cycle modulation	
	3.4	Precision Rectifiers: Half and full wave precision rectifiers and their applications	
	3.5	Peak detectors, sample and hold circuits, voltage to frequency converter, frequency to voltage converter, logarithmic converters and antilog converters	
4		Data Converters	06
	4.1	Performance parameters of ADC, single ramp ADC, ADC using DAC, dual slope ADC, successive approximation ADC, flash ADC, ADC0808/0809 and its interfacing	
	4.2	Performance parameters of DAC, binary weighted register DAC, R/2R ladder DAC, inverted R/2R ladder DAC, DAC0808 and its interfacing	
5		Special Purpose Integrated Circuits	08
	5.1	Functional block diagram, working, design and applications of Timer 555.	
	5.2	Functional block diagram, working and applications of VCO 566, PLL 565, multiplier 534, waveform generator XR 2206, power amplifier LM380	
6		Voltage Regulators	08
	6.1	Functional block diagram, working and design of three terminal fixed (78XX, 79XX series) and three terminal adjustable (LM 317, LM 337) voltage regulators	
	6.2	Functional block diagram, working and design of general purpose 723 (LVLC, LVHC, HVLC and HVHC) with current limit and current fold-back protection, Switching regulator topologies, functional block diagram and working of LT1070	
		monolithic switching regulator	52

## Prerequisites: Knowledge of Vector Calculus, Cylindrical and Spherical coordinate systems

#### **Course Objective:**

- 1. To study relationship between electrostatics, steady magnetic field and time varying fields using Maxwell's equations for different media
- 2. To understand the propagation of wave in different media like dielectric and conducting media by solving wave equation and find parameters of media
- 3. To calculate energy transported by means of electromagnetic waves from one point to another and to study polarization of waves
- 4. To solve electromagnetic problems using different numerical methods
- 5. To extend students' understanding about wave propagation by different techniques such as ground waves and space waves
- 6. To study radiation from a current element

#### **Course Outcomes:**

- 1. Ability to find nature of electric or magnetic fields produced due to different charge distributions
- 2. Ability to understand working of different equipment based on electromagnetic effects used in day to day life
- 3. Knowledge of behavior of EM waves and travelling of waves in free space as well as media
- 4. Ability to identify and solve problems related to the propagation of waves
- 5. Ability to understand the basics of wave propagation required for the study of antennas

Module No.	Unit No.	Topics	Hrs.

## **Course Objective:**

1. To provide a comprehensive coverage of continuous time and discrete time of Signals and Systems.

2. To introduce various time domain and frequency domain methods for analysis of Signals and systems.

## **Course Outcome:**

1. Student will be able to differentiate between continuous time and discrete time of Signals and Systems.

2. Student will be able to do time domain and frequency domain analysis of Signals and systems.

Module	Unit	Topics	Hrs.
No.	No.		
1.		Continuous And Discrete Time Signals And Systems	8
	1.1	Mathematical representation, classification of CT and DT signals, arithmetic	
		operations on the signals, transformation of independent variable	
	1.2	Mathematical representation, classification of CT and DT systems	
	1.3	Sampling and reconstruction, aliasing effect	
2		Time Domain Analysis Of Continuous and Discrete Signals And Systems	6
	2.1	Properties of LTI systems, impulse and step response.	
	2.2	Use of convolution integral and convolution sum for analysis of LTI systems.	
	2,3	Properties of convolution integral/sum.	
3		Frequency Domain Analysis of Continuous Time System Using Laplace	8
		Transform	
	3.1	Need of Laplace transform, review of Laplace transform, properties, inverse of	
		Laplace transform, concept of ROC, poles and zeros	
	3.2	Unilateral Laplace transform	
	3.3	Analysis and characterization of LTI system using Laplace transform: impulse	
		and step response, causality, stability, stability of causal system	
	3.4	Block diagram representation	
4		Frequency Domain Analysis of Discrete Time System Using Z Transform	14
	4.1	Need of Z transform, definition, properties of unilateral and bilateral Z	
		Transform, mapping with s plane, relationship with Laplace transform	
	4.2	Z transform of standard signals, ROC, poles and zeros of transfer function,	
		inverse Z transform	
	4.3	Analysis and characterization of LTI system using Z transform: impulse and step	
		response, causality, stability, stability of causal system	
	4.4	Block diagram representation, system realization	
5		Frequency Domain Analysis of Continuous and Discrete Signals	12
	5.1	Review of Fourier series, Discrete time Fourier series, its properties	-
	5.2	Fourier transform, properties of Fourier transform, relationship with Laplace and	
		Z transform	
	5.3	Discrete time Fourier transform, properties, frequency sampling, Discrete Fourier	
		transform, properties	
6		Correlation and Spectral Density	04
	6.1	Comparison of convolution and correlation, Auto and cross correlation,	
		energy/power spectral density	
	6.2	Relation of ESD, PSD with auto-correlation	
	6.3	Relationship between ESD/PSD of input and output of LTI system

#### Internal Assessment (IA):

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered as final IA marks

## **End Semester Examination**:

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3: Question No.1 will be compulsory and based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
- 4: Remaining questions will be selected from all the modules.

#### **Term Work:**

At least 10 assignments based on the entire syllabus of Subject EXC504 (Signals and Systems) should be set to have well predefined inference and conclusion. The assignments should be students' centric and attempt should be made to make assignments more meaningful, interesting and innovative. Term work assessment must be based on the overall performance of the student with every assignment graded from time to time. The grades should be converted into marks as per the Credit and Grading System manual and should be added and averaged. The grading and term work assessment should be done based on this scheme.

The final certification and acceptance of term work ensures satisfactory performance of tutorial work and minimum passing marks in term work.

**Prerequisites: Knowledge of** Probability Theory and Signals and Systems **Course Objective:** 

- 1. To understand basic Concept of Probability Theory in communication systems.
- 2. To understand basic concept of Information Theory and Source Coding.
- 3. To understand Pulse Shaping techniques for optimum transmission of signal.
- 4. To understand Band pass digital modulation and demodulation (binary and M-level;
- 5. ASK, PSK and FSK), including their performance in noise.
- 6. To understand basic concept of channel error correcting codes.
- 7. To understand basic concept of spread spectrum techniques.

#### **Expected Outcomes:**

- 1. Ability to find nature of random signal and its statistical characteristics.
- 2. Ability to understand how to make code optimum in containing information generated by source.
- 3. Ability to find the technique to enhanced the transmission efficiency of the system.
- 4. Ability to understand different modulation techniques such as bandwidth limited and power limited.
- 5. Ability to find the technique to combat transmission impairments.
- 6. Ability to find the modulation technique used in wireless communication..

Module	Unit	Topics	Hrs.
No.	No.	Amplication of Duchakility Theory in Communication Systems	07
1	1.1	Application of Probability Theory in Communication Systems Introduction to digital communication system, significance of AWGN channel, pulse dispersion in the channel	07
	1.2	Introduction to probability and sample space, Baye's rule, conditional probability and statistical independence, random variables, probability functions, mean and variance of random variables and sum of random variables	
	1.3	<b>Probability Models</b> : Binomial Distribution, Poisson Distribution, Gaussian PDF, Rayleigh PDF and Rician PDF, Central-Limit Theorem	
	1.4	Binary Synchronous Channel(BSC), development of optimal receiver	~ =
2		Information Theory and Source Coding	05
	2.1	Measure of Information, Entropy, Information rate, Channel capacity	
	2.2	Capacity of a Gaussian channel, bandwidth, S/N trade-off, Shannon's source coding theorem	
	2.3	Coding to increase the average information per bit, Huffman coding, Lempel Ziv coding, examples and applications of source coding	
3		Pulse Shaping for Optimum Transmission	08
C	3.1	Line codes and their desirable properties, PSD of digital data.	00
	3.2	<b>Baseband PAM transmission</b> : Concept of inter channel and inter symbol interference, eye pattern	
	3.3	Concept of equalizer to overcome ISI, Nyquist's Criterion for distortion less transmission	
	3.4	Duo-binary encoding and modified duo-binary encoding	
4		Digital Modulation Techniques	15
	4.1	Digital modulation formats, coherent and non- coherent reception	
	4.2	Binary modulation techniques: BPSK, BFSK, BASK	
	4.3	<b>M-ary Modulation techniques:</b> QPSK, M-ary PSK, MSK , M-ary FSK, M-ary QAM, Differential encoded BPSK & D-QPSK	
	4.4	<b>Optimal Reception of Digital Data</b> : A baseband signal receiver and its Probability of error	
	4.5	Optimum receiver and its transfer function, matched filter and its properties	
5		Error Control Codes	12
	5.1	Need for channel encoding, discrete memory-less channel, redundancy, code rate, code efficiency and hamming bound	
	5.2	Linear block codes, cyclic codes, block interleaving	
	5.3	Convolution codes: State diagram, code tree, trellis diagram	
	5.4	Decoding of Convolutional codes using Viterbi algorithm	
6		Spread Spectrum Modulation	05
	6.1	Need for spread spectrum modulation, pseudo noise sequence generation, direct-sequence spread spectrum (DSSS)	
	6.2	Processing gain and jamming margin, frequency-hop spread spectrum (FHSS)	
	6.3	Application of spread spectrum : DS-CDMA

## **Course Pre-requisite**

• FEC206 Communication Skills

## **Course Objective**

- 1. To inculcate in students professional and ethical attitude, effective communication skills, teamwork, skills, multidisciplinary approach and an ability to understand engineer's social responsibilities.
- 2. To provide students with an academic environment where they will be aware of the excellence, leadership and lifelong learning needed for a successful professional career.
- 3. To inculcate professional ethics and codes of professional practice
- 4. To prepare students for successful careers that meets the global Industrial and Corporate requirement' provide an environment for students to work on Multidisciplinary projects as part of different teams to enhance their team building capabilities like leadership, motivation, teamwork etc.

Course Outcomes: A learner will be able to .....

- 1. communicate effectively in both verbal and written form and demonstrate knowledge of professional and ethical responsibilities
- 2. Participate and succeed in Campus placements and competitive examinations like GATE, CET.
- 3. Possess entrepreneurial approach and ability for life-long learning.
- 4. Have education necessary for understanding the impact of engineering solutions on Society and demonstrate awareness of contemporary issues.

End Semester Examination: There will be no ESE written examination

List of Assignments

## **Term Work**

Term work shall consist of assignments as listed below

- 1. Report Writing (Synopsis or the first draft of the Report)
- 2. Technical Proposal (Group activity, document of the proposal)
- 3. Interpersonal Skills (Group activity and Role play)
- 4. Interpersonal Skills (Documentation in the form of soft copy or hard copy)
- 5. Meetings and Documentation (Notice, Agenda, Minutes of Mock Meetings)
- 6. Corporate ethics and etiquettes (Case study, Role play)
- 7. Cover Letter and Resume
- 8. Printout of the PowerPoint presentation

The distribution of marks for term work shall be as follows,

- 1. Assignments : 20 marks
- 2. Project Report Presentation: 15 marks
- 3. Group Discussion: 15 marks

At least total 08 assignments, project report presentation and group discussion covering entire syllabus must be given during the batch wise practical. The assignments and project work should be students' centric and an attempt should be made to make assignments more meaningful, interesting and innovative. Term work assessment must be based on the overall performance of the student with every assignment / project / group discussion graded from time to time. The average of grades converted in to marks should be taken into account for term work assessment.

EXL5	04 Mini Project I					25	25	50		

The main intention of Mini Project is to make student enable to apply the knowledge and skills learned out of courses studied to solve/implement predefined practical problem. The students undergo various laboratory/tutorial/simulation laboratory/work shop courses in which they do experimentation based on the curriculum requirement. The Mini Project may be beyond the scope of curriculum of courses taken or may be based on the courses but thrust should be on

- Learning additional skills
- Development of ability to define and design the problem and lead to its accomplishment with proper planning
- Learn the behavioral science by working in a group

The group may be maximum **four** (04) students. Each group will be assigned one faculty as a supervisor. The college should keep proper assessment record of progress of the project and at the end of the semester it should be assessed for awarding TW marks. The TW may be examined by approved internal faculty appointed by the head of the institute. The final examination will be based on demonstration in front of internal and external examiner. In the examination each individual student should be assessed for his/her contribution, understanding and knowledge gained about the task completed.

The students may use this opportunity to learn different computational techniques as well as some model development. This they can achieve by making proper selection of Mini Projects.

## **Course Pre-requisite:**

- EXC302: Electronic Devices
- EXC303: Digital Circuits and Design
- EXC402: Discrete Electronic Circuits
- EXC502: Design With Linear Integrated Circuits

#### **Course Objectives:**

- 1. To teach fundamental principles of VLSI circuit design and layout techniques
- 2. To highlight the circuit design issues in the context of VLSI technology

## **Course Outcomes:**

#### After successful completion of the course student will be able to

- 1. demonstrate a clear understanding of choice of technology and technology scaling
- 2. design MOS based circuits and draw layout
- 3. realize logic circuits with different design styles
- 4. demonstrate a clear understanding of system level design issues such as protection, timing and power dissipation

Module	Unit	Topics	Hrs.
No.	No.		
1		Technology Trend	6
	1.1	Technology Comparison: Comparison of BJT, NMOS and CMOS technology	
	1.2	MOSFET Scaling: Types of scaling, Level 1 and Level 2 MOSFET Models,	
		MOSFET capacitances	
2		MOSFET Inverters	10
	2.1	Circuit Analysis: Static and dynamic analysis (Noise, propagation delay and power	
		dissipation) of resistive load and CMOS inverter, comparison of all types of MOS	
		inverters, design of CMOS inverters, CMOS Latch-up	
	2.2	Logic Circuit Design: Analysis and design of 2-I/P NAND and NOR using	
		equivalent CMOS inverter	
3		MOS Circuit Design Styles	10
	3.1	Design Styles: Static CMOS, pass transistor logic, transmission gate, Pseudo	
		NMOS, Domino, NORA, Zipper, C <sup>2</sup> MOS, sizing using logical effort	
	3.2	Circuit Realization: SR Latch, JK FF, D FF, 1 Bit Shift Register, MUX, decoder	
		using above design styles	
4		Semiconductor Memories	08
	4.1	SRAM: ROM Array, SRAM (operation, design strategy, leakage currents,	
		read/write circuits), DRAM (Operation 3T, 1T, operation modes, leakage currents,	
		refresh operation, Input-Output circuits), Flash (mechanism, NOR flash, NAND	
		flash)	
	4.2	Peripheral Circuits: Sense amplifier, decoder	
5		Data Path Design	08
	5.1	Adder: Bit adder circuits, ripple carry adder, CLA adder	
	5.2	Multipliers and shifter: Partial-product generation, partial-product accumulation,	
		final addition, barrel shifter	
6		VLSI Clocking and System Design	10
	6.1	Clocking: CMOS clocking styles, Clock generation, stabilization and distribution	
	6.2	Low Power CMOS Circuits: Various components of power dissipation in CMOS,	
		Limits on low power design, low power design through voltage scaling	
	6.3	IO pads and Power Distribution: ESD protection, input circuits, output circuits,	
		simultaneous switching noise, power distribution scheme	
	6.4	Interconnect: Interconnect delay model, interconnect scaling and crosstalk	
		Total	52

No.	No.		
1		Introduction to Computer Organization	10
	1.1	Fundamental units of computer organization, evolution of computers, von	
		neumann model, performance measure of computer architecture	
	1.2	Introduction to buses and connecting I/O devices to CPU and Memory, bus structure,	
	1.3	Introduction to number representation methods, integer data computation, floating point arithmetic.	
2		Processor Organization and Architecture	14
	2.1	CPU Architecture, register organization, instruction formats, basic instruction cycle, instruction interpretation and sequencing	
	2.2	<b>Control unit:</b> soft wired (micro-programmed) and hardwired control unit design methods	
	2.3	Microinstruction sequencing and execution, micro operations, concepts of nano programming.	
	2.4	Introduction to RISC and CISC architectures and design issues, case study on 8085 microprocessor, features, architecture, pin configuration and addressing modes	
3		Memory Organization	12
	3.1	Introduction to memory and memory parameters, classifications of primary and secondary memories, types of RAM and ROM, allocation policies, memory hierarchy and characteristics	
	3.2	Cache memory concept, architecture (L1, L2, L3), mapping techniques, cache coherency	
-	3.3	Interleaved and associative memory, virtual memory, concept, segmentation and paging, page replacement policies	
4		Input / Output Organization	8
	4.1	Types of I/O devices and access methods, types of buses and bus arbitration, I/O interface, serial and parallel ports	
	4.2	Types of data transfer techniques, programmed I/O, interrupt driven I/O and DMA	
	4.3	Introduction to peripheral devices, scanner, plotter, joysticks, touch pad, storage devices	
5		Introduction To Parallel Processing System	4
	5.1	Introduction to parallel processing concepts, Flynn's classifications, pipeline processing, instruction pipelining, pipeline stages, pipeline hazards	
6		Introduction to Intel IA32 Architecture.	4
	6.1	Intel IA32 family architecture, register structure, addressing modes, advancements in arithmetic and logical instructions, exception handling in IA32 architecture	
		Total	52

#### **Internal Assessment (IA):**

Two tests must be conducted which should cover at least 80% of syllabus. The average marks of both the tests will be considered as final IA marks

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total 4 questions need to be solved.
- 3: Question No.1 will be compulsory and based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
- 4: Remaining questions will be selected from all the modules.

#### **Course Pre-requisite:**

• EXC302: Electronic Devices

#### **Course Objectives:**

- 1. To teach power electronic devices and there characteristics.
- 2. To highlight power electronic based rectifier, inverter and chopper.

## **Course Outcomes:**

## After successful completion of the course student will be able to

- 1. Discuss tradeoffs involved in power semiconductor devices.
- 2. Analyze different types of rectifier and inverter.
- 3. Carry out verifications of issues involved in rectifier via simulations

Module	Unit	Contents	Hrs.
No.	No.		
1		Silicon Controlled Rectifiers	10
	1.1	Principle of operation of SCR, static and dynamic characteristics, gate	
		characteristics	
	1.2	Methods of turning on (type of gate signal), firing circuits (using R, R-C,	
		UJT),commutation circuit	
	1.3	Protection of SCR	
2		Other Switching Devices	08
	2.1	Principle of operation, characteristics, rating and applications of:	
		TRIAC, DIAC, GTO, MOSFET, IGBT and power BJT	
	2.2	Driver circuits for power transistors	
3		*Controlled Rectifiers	12
	3.1	Half wave controlled rectifiers with R, R-L load,	
	3.2	Full wave controlled rectifiers, half controlled and fully controlled rectifiers	
		with R, R-L load (effect of source inductance not to be considered)	
	3.3	Single phase dual converter, three phase half controlled and fully controlled	
		rectifiers with R load only	
		*Numerical based on calculation of output voltage	
4		*Inverters	10
	4.1	Introduction, principle of operation, performance parameters of:	
		Single phase half / full bridge voltage source inverters with R and R-L load,	
		three phase bridge inverters $(120^{\circ} \text{ and } 180^{\circ} \text{ conduction mode})$ with R and R-	
		Lload	
	4.2	Voltage control of single phase inverters using PWM techniques, harmonic	
		neutralization of inverters, applications	
5		*Numerical with R load only	6
5	5 1	Choppers	6
5	5.1	Choppers Basic principle of step up and step down choppers	6
5	5.1 5.2	Choppers           Basic principle of step up and step down choppers           DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk	6
		Choppers Basic principle of step up and step down choppers DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk regulators, (CCM mode only)	
5 6	5.2	Choppers           Basic principle of step up and step down choppers           DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk regulators, (CCM mode only)           AC Voltage Controllers	6
		Choppers           Basic principle of step up and step down choppers           DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk regulators, (CCM mode only)           AC Voltage Controllers           Principle of On-Off control, principle of phase control, single phase	
6	5.2	Choppers           Basic principle of step up and step down choppers           DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk regulators, (CCM mode only)           AC Voltage Controllers           Principle of On-Off control, principle of phase control, single phase bidirectional control with R and RL load	4
	5.2       6.1	Choppers           Basic principle of step up and step down choppers           DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk regulators, (CCM mode only)           AC Voltage Controllers           Principle of On-Off control, principle of phase control, single phase bidirectional control with R and RL load           Cycloconvertor	
6	5.2	Choppers           Basic principle of step up and step down choppers           DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk regulators, (CCM mode only)           AC Voltage Controllers           Principle of On-Off control, principle of phase control, single phase bidirectional control with R and RL load	4

## **Course Objective:**

- 1. To study DFT and its computation
- 2. To study the design techniques for digital filters
- 3. To study the finite word length effects in signal processing
- 4. To study the fundamentals of digital signal processors
- 5. To get acquainted with the DSP applications

## **Course Outcome:**

Students will be able to understand concept of digital filters

- 1. Students will be able to decide the selection and design of digital filters
- 2. Students will understand the effect of hardware limitation
- 3. Students will be understand need of DSP processors
- 4. Students will be able to understand the use and application of DSP processors

Module	Unit	Topics	Hrs.
No.	No.		
1.0		<b>Discrete Fourier Transform and Fast Fourier Transform</b>	10
	1.1	<b>Discrete Fourier Series</b> : Properties of discrete Fourier series, DFS representation of	
		periodic sequences.	
	1.2	Discrete Fourier transforms: Properties of DFT, linear convolution of sequences	
		using DFT, computation of DFT, relation between Z-transform and DFS	
	1.3	Fast Fourier Transforms: Fast Fourier transforms (FFT), Radix-2 decimation in	
		time and decimation in frequency FFT algorithms, inverse FFT, and composite FFT	
2.0		IIR Digital Filters	10
	2.1	Mapping of S-plane to Z-plane, impulse invariance method, bilinear Z transformation	
		(BLT) method, frequency warping, pre-warping	
	2.2	Analog filter approximations: Butter worth and Chebyshev, design of IIR digital	
		filters from analog filters, design examples	
	2.3	Analog and digital frequency transformations	
3.0		FIR Digital Filters	10
	3.1	Characteristics of FIR digital filters, frequency response, location of the zeros of	
		linear phase FIR filters	_
	3.2	Design of FIR digital filters using window techniques, Gibbs phenomenon, frequency	
		sampling technique, comparison of IIR and FIR filters	
4.0		Finite Word Length Effects in Digital Filters	08
	4.1	Number representation, fixed point, sign-magnitude, one's complement, two's	
		complement forms, floating point numbers	_
	4.2	Quantization, truncation, rounding, effects due to truncation and rounding, Input	
		quantization error, Product quantization error, co-efficient quantization error, zero-	
	4.2	input limit cycle oscillations, overflow limit cycle oscillations, scaling	
	4.3	Quantization in Floating Point realization IIR digital filters, finite word length effects	
		in FIR digital filters, quantization effects in the computation of the DFT- quantization errors in FFT algorithms	
5.0		Introduction to DSP Processors	08
5.0	5.1	Introduction to fixed point and floating point DSP processor, multiplier and multiplier	00
	J.1	accumulator (MAC), modified bus structures and memory access schemes in DSPs,	
		multiple access memory, multiport memory, VLIW architecture, pipelining, special	
		addressing modes, on-chip peripherals	
	5.2	Features of TMS 320c67xx DSP processor, architecture of TMS 320c67xx DSP	
		processor, architecture features: computational units, bus architecture memory, data	
		addressing, address generation unit, program control, program sequencer, pipelining,	
		interrupts, features of external interfacing, on-chip peripherals, hardware timers, host	
		interface port, clock generators, SPORT	
6.0		Applications of DSP Processors	06
	6.1	Speech Processing: Speech analysis, speech coding, sub band coding, channel	]
		vocoder, homomorphic vocoder, digital processing of audio signals.	
	6.2	Radar signal processing: Radar principles, radar system and parameter	
		considerations, signal design	
		Total	52

At least 10 experiments based on the entire syllabus of Subject **EXC601** (**VLSI Design**) should be set to have well predefined inference and conclusion. Computation/simulation based experiments are encouraged. The experiments should be students' centric and attempt should be made to make experiments more meaningful, interesting and innovative. Term work assessment must be based on the **overall performance** of the student with **every experiment graded from time to time**. The grades should be converted into marks as per the **Credit and Grading System** manual and should be **added and averaged**. The grading and term work assessment should be done based on this scheme.

The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.

**Oral** exam will be based on the entire syllabus.

<b>ETL604</b>	Mini Project II					25	25	50

The main intention of Mini Project is to make student enable to apply the knowledge and skills learned out of courses studied to solve/implement predefined practical problem. The students undergo various laboratory/tutorial/simulation laboratory/work shop courses in which they do experimentation based on the curriculum requirement. The mini Project may be beyond the scope of curriculum of courses taken or may be based on the courses but thrust should be on

- Learning additional skills
- Development of ability to define and design the problem and lead to its accomplishment with proper planning.
- Learn the behavioral science by working in a group

The group may be maximum **four** (04) students. Each group will be assigned one faculty as a supervisor. The college should keep proper assessment record of progress of the project and at the end of the semester it should be assessed for awarding TW marks. The TW may be examined by approved internal faculty appointed by the head of the institute. The final examination will be based on demonstration in front of internal and external examiner. In the examination each individual student should be assessed for his/her contribution, understanding and knowledge gained about the task completed.

The topic of Mini Project I and II may be different and / or may be advancement in the same topic. The students may use this opportunity to learn different computational techniques as well as some model development. This they can achieve by making proper selection of Mini Projects.
